

The diagram shows two nodes of a linked list. The first node is a rectangle divided into two cells: the left cell contains a black dot, and the right cell contains another black dot. An arrow points from the right cell to the left cell of the second node. The second node is also a rectangle divided into two cells: the left cell contains a black dot, and the right cell contains a diagonal line. Below the first node is the number 47, and below the second node is the number 11.
